

A Evidence workflow

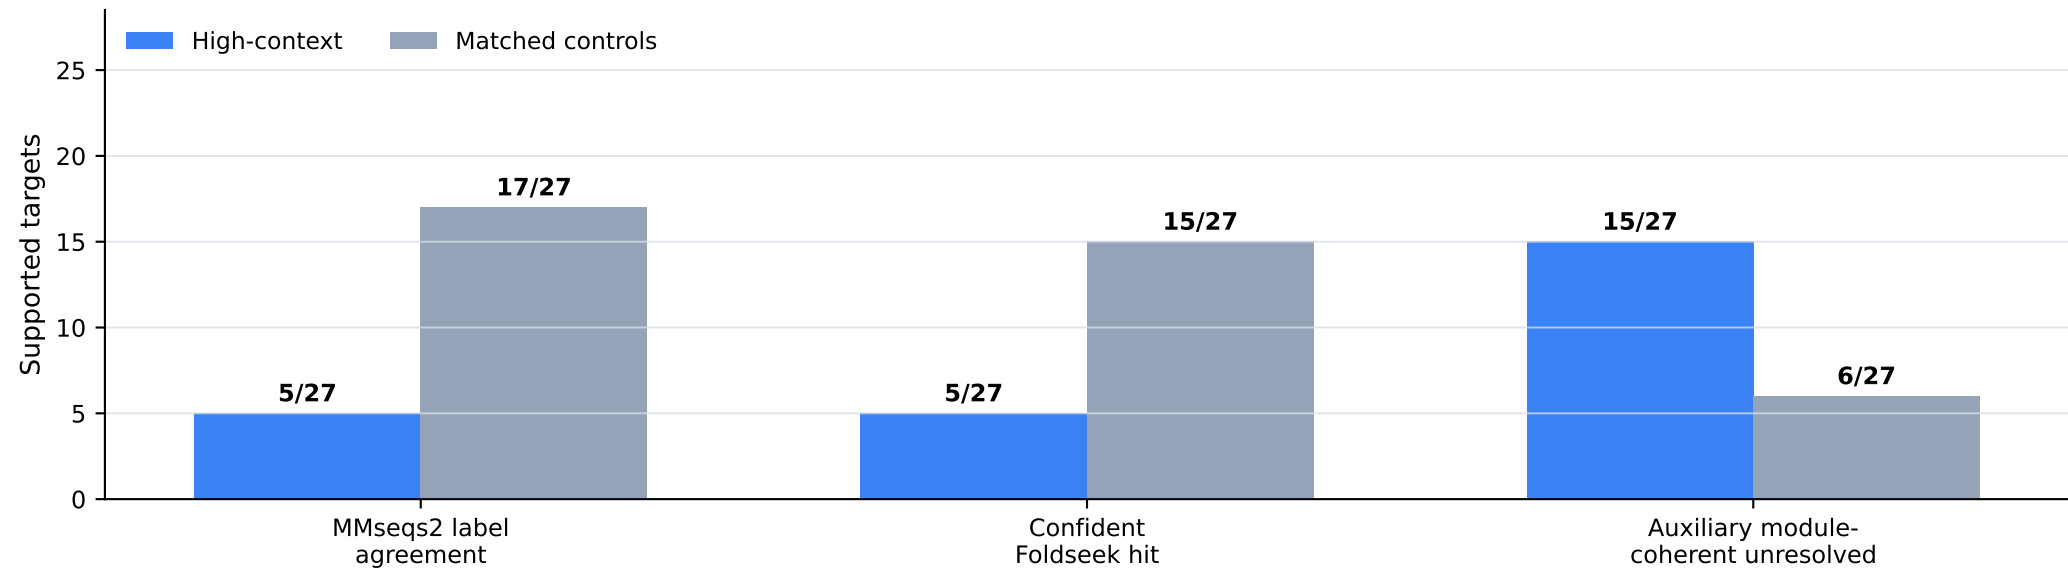

Post hoc evidence only; not de novo model input.

B Structure-evidence classes

Weak, ambiguous, low-confidence, and PDB100-orphan regimes dominate the high-context panel.

C Evidence-regime enrichment

High-context-gain candidates are less often sequence/structure-resolved, but are enriched in the auxiliary module-coherent unresolved regime. Not independent validation. Auxiliary module-coherent unresolved: raw OR=4.38 (95% CI 1.34-14.28); McNemar exact p=0.0117; Fisher p=0.024
